

# Cloud-Based Security with Network Box

Infrastructure Powered by 6fusion

## The Best Way to protect your clients with Firewall, Intrusion Detection & Prevention and Virtual Private Networking Solutions in the Cloud

With the move of more and more business critical applications to the cloud, you need to ensure your clients receive the best possible infrastructure protection and security. Network Box Managed Security Services gives you the ability to deliver award-winning Firewall, Intrusion Detection and Prevention (IDP) and Virtual Private Networking (VPN) services on the 6fusion Infrastructure as a Service (IAAS) platform. Among cloud-computing security solutions, Network Box is the only one that is managed, automatically configuring and monitoring security – saving you time and resources.

The combination of 6fusion and Network Box delivers on the benefits of cloud computing behind the security of an industry leading firewall. The Network Box Firewall has been certified and templated directly into the 6fusion platform, allowing solution providers to deploy security measures simply and easily.

### About 6fusion

6fusion's UC6 IaaS platform is designed to allow service providers to offer cloud computing risk free. 6fusion makes it possible to instantly provision and deploy a cloud-based computing infrastructure as part of your service offerings. UC6 provides an end-to-end cloud management platform for public, private and hybrid clouds. Users can choose the data center that houses their workloads, overcoming many of the concerns about using the cloud. That means you can deploy any number of applications in any way you or your customers choose. The biggest differentiator is 6fusion's unique metering algorithm – the Workload Allocation Cube (WAC) – which turns the cloud into a pay-per-use billable utility. Similar to paying for electricity by the kilowatt, the WAC ensures customers only pay for what they actually use and provides valuable insight into consumption and cost performance.

### About Network Box

Network Box transforms the way organizations protect their computer networks. Network Box's Managed Security Services, used by many of the world's leading businesses, provide a global network of state-of-the-art Security Operations Centers to monitor, update and manage protected client gateways in real time. Every Network Box system around the world also utilizes Network Box's award winning PUSH update technology, which offers the fastest security update service available. Updates are pushed out within an average of 45 seconds from the time any new malware signature, software update or security patch becomes available. Through monitoring, updates and management around the clock, Network Box provides the technological and logistical edge needed to stay one step ahead of hackers.

# Cloud-Based Security with Network Box

Infrastructure Powered by 6fusion

## Cloud-Based Network Security Advantages:

- Offer your cloud customers the same or better security protection than those provided on physical networks
- Security functionality is configured and managed for you, eliminating significant operational overhead
- No hardware to purchase or maintain
- Rapid deployment of secure cloud environment for any application or system

## Why 6fusion?

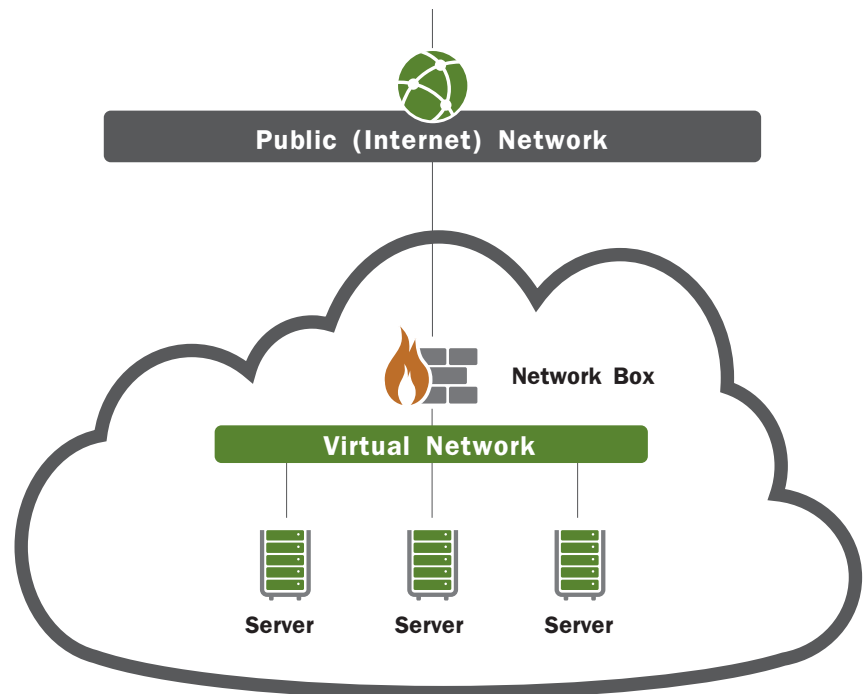

- High performance, high availability network, datacenters and computing resources
- Dynamic resource allocation
- Run virtually any type of application or system out of the box
- Per WAC pricing provides clear, accurate and transparent internal consumption reporting and charge backs
- Global iNode Network allows you to manage data residency
- 99.99% Uptime SLA

## Why Network Box?

- State-of-the-art Managed Security Services for any size organization
- Award-winning PUSH update technology delivers updates in seconds
- Comprehensive range of gateway security services available
- Secure, in-the-cloud management system included
- Adobe PDF management reports automatically generated
- Free Apple iPhone/iPad application for monitoring and managing remotely

## Why Deliver Network Security in the Cloud?

In today's Internet-connected world, enterprise-grade network security is imperative for every organization. The Internet never sleeps - attacks and intrusions occur twenty-four hours a day, 365 days a year. As companies continue to move applications to the cloud, service providers must offer the same or higher levels of protection than those provided on physical networks. 6fusion solution providers can now, simply and easily, take advantage of the Network Box solution to protect their customers' data in the 6fusion cloud.
